### **Phase I Environmental Site Assessment (ESA)**

#### APACHE MANOR BLOCK 5 TBA

EAST APACHE STREET AND NORTH MARION AVENUE CITY OF TULSA, TULSA COUNTY, OKLAHOMA 74115

#### 1.0 EXECUTIVE SUMMARY

The following is a brief synopsis of the findings based upon the involved research and the February 27, 2012 (Monday), site inspection performed by Mr. David Channell of ALL Consulting, LLC (ALL). Mr. Channell was accompanied by Mr. Ben Bockelmann and Mr. Doug Cooper, also of ALL.

- 1) The subject property, henceforth referred to as the "Site," is bounded on the north by East Apache Street and Tulsa Community College northeast campus, on the east by North Marion Avenue and multi-family residential housing, on the south by Apache Manor apartment complex, and unused land on the west, in the City of Tulsa, Tulsa County, Oklahoma. The Site is located approximately four miles northeast of downtown Tulsa, Oklahoma, within an area consisting predominantly of residential and commercial land (see **Figure 1**.) The Site currently consists of undeveloped property with a maintained vegetative cover. The inspection consisted of a grid inspection of the property interior followed by a pedestrian perimeter survey of the Site.
- 2) An interview was conducted with Mr. Terry McGee (Property Owner) on February 29, 2012. Additional interviews were conducted with Ms. Jemina Lotti (Tulsa Community College) on March 13, 2012, and Mr. Paul Davis (Oklahoma Department of Environmental Quality [ODEQ], Voluntary Cleanup Program) on March 12, 2012. The Tulsa Fire Marshall and Apache Manor Apartments were also contacted twice for information regarding environmental concerns at the Site. To date no response has been received from either office.
- 3) According to information obtained from Mr. Terry McGee (Property Owner) there are no deed restrictions, environmental liens, or any other Activity and Use Limitations (AULs) affecting the Site. According to information provided by Environmental Data Resources, Inc. (EDR), there are no deed restrictions, environmental liens, or other AUL affecting the Site.

#### FINDINGS AND CONCLUSIONS:

ALL Consulting has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 on the Apache Manor Block 5 Targeted Brownfields Assessment (TBA) Site in the City of Tulsa, Tulsa County, Oklahoma. An onsite inspection was conducted on Monday, February 27, 2012. Any exceptions to or deletions from this practice are described in Section 4.3 of this report. Please review the following findings of the inspection.

A) The Site currently consists of vacant and undeveloped land. The Site is covered with a maintained vegetative cover (see **Appendix D**: Photographs 1-10). The topography

generally slopes toward the east. Observations for distressed vegetation were difficult due to the dormancy of plants during the winter; however, no signs of distressed vegetation were evident during the Site inspection. Debris associated with construction/demolition activities was observed during the Site Inspection (see **Appendix D**: Photographs 16-23 and 25). Included in the debris were several pieces of concrete pipe, clay sewer pipe, bricks, asphalt, and chunks of concrete (see **Appendix D**: Photographs 11-14, 17-19, 21, 22, and 25). The debris is limited to the western boundary of the Site although it appears that some debris is located in the southwestern portion of the Site and has been covered by soil to provide a level ground surface (see **Appendix D**: Photographs 11-13).

- B) A review of the historical aerial photographs of the Site from 1967, 1973, 1980, 1984, 1995, 2005, 2006, and 2008 revealed the presence of apparent oil well lease roads and oil well sites on the property adjacent to the south. However, the onsite visual inspection revealed the reported locations of previous oil well sites were no longer present as the Apache Manor Apartment Complex has been constructed on these locations. Additionally, a review of information provided by Sooner Well Log Services, Inc., as well as the Oklahoma Corporation Commission (OCC) Geographical Information Systems Data provided no well records or well plugging records within the Site. **Figure 2** is a general layout of the Site and adjoining areas with the approximate locations of observed features indicated.
- C) No historical Sanborn maps exist for the Site. A review of historical documents and interviews with government officials, the property owner, and adjacent property occupants revealed that no dwellings, commercial, or industrial properties were identified as being located within the Site.
- D) A review of historical regulatory records revealed four (4) confirmed releases from Leaking Underground Storage Tanks (LUSTs) within one-half mile radius of the Site. All of the releases were up-gradient from the site and are currently closed. Due to the closed status, distance, and/or relative topographic positions, these LUST cases are not considered to pose a current material threat for adverse environmental impact to the Site.
- E) Additional information gathered through records reviews, interviews with persons knowledgeable about the Apache Manor Block 5 Site and its history, and from Site observations by ALL, indicates that no additional releases or potential releases on, or near, the Site were discovered that would be considered above de minimis conditions.

#### **RECOMMENDATIONS:**

Based on information obtained during the Site visit conducted on February 27, 2012, as well as information obtained through historical records review and interviews, this assessment has identified no RECs, one (1) HREC, no BERs, and two (2) Other Environmental Finding. As no RECs were identified, it does not appear that further investigation is warranted at this time. However, this opinion is based solely on conditions at the time of the inspection. Subsequent changes to Site conditions may require additional investigation to determine if any

environmental impacts have occurred. The environmental findings within each category are summarized below.

### **Recognized Environmental Conditions (REC)**

1) No RECs were identified during the Site visit or through information acquired during historical records review and interviews.

#### **Historical Recognized Environmental Conditions (HREC)**

1) *Historic Oil and Gas Wells:* A review of the historical topographic maps indicates that three (3) wells were located on or near the Site. A review of historical aerial photographs of the Site from 1967 revealed the presence of apparent oil well lease roads and oil well sites on property adjacent to the south. However, a review of information provided by Sooner Well Log Services, Inc., produced no well records or plugging records for wells within the boundaries of the Site. Currently unidentified surface and subsurface features related to petroleum production may be discovered during development of the Site. Therefore, if such features are noted during future development, it is recommended that surface, subsurface, and groundwater sampling be conducted and analyzed for total petroleum hydrocarbons (TPH), RCRA Metals, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCS) and Brine in the area of the observed oilfield related feature to determine if there have been any adverse environmental impacts above regulatory action levels.

### **Business Environmental Risks (BER)**

1) No BERs were identified during the Site visit or through information acquired during historical records review and interviews.

## **Other Environmental Findings**

- 1) *Old Debris Piles:* Observations made during the onsite investigation revealed the presence of construction/demolition debris along the western boundary, and in the southwestern portion within the interior of the Site. While no hazardous materials or petroleum products were observed within the debris, it is recommended that the removal of any debris from the Site should be coupled with careful observation for any potential contaminants associated with the debris.
- 2) Former LUST Sites: The review of regulatory records identified four (4) LUST cases (The Chief Realty Company, UPS Ground Freight facility, J.R. Herman Gibson site, and Quik Trip Store #4), the latest of which was closed on February 17, 2011. Due to the closed status of these former LUST cases, the sites are not currently considered to present a material threat for adverse environmental impact to the Site. A closed status indicates that either the location was found to be below regulatory action thresholds, or was remediated to the satisfaction of the governing regulatory agency. However, in the event that regulatory action thresholds change in the future, there is a possibility that these LUST cases could be reopened. Should that occur, further investigation may be warranted.

#### 4.0 Introduction

#### 4.1. PURPOSE

In general, the Comprehensive Environmental Response, Compensation, and Liability Act of 1980 (CERCLA), which is also referenced as Superfund, provides a means for certain purchasers of real property to potentially defend themselves from CERCLA liability associated with preacquisition contamination (hazardous substances and petroleum products) present on the property to be purchased by meeting the requirements of any of the following:

- "innocent landowner defense"
- "contiguous property owners"
- "bona fide prospective purchaser"

Among many other things, such landowner liability protections (LLP) require the purchaser to make "All Appropriate Inquiry" into previous ownership and uses of the subject property. To date, the standard practice for meeting the requirements of "All Appropriate Inquiry" is the performance of a Phase I Environmental Site Assessment (ESA) in accordance with American Society for Testing and Materials (ASTM) E 1527-05 protocols and in compliance with the requirements of the Small Business Liability Relief & Revitalization Act (Federal Brownfields Law) and 40 Code of Federal Regulations (CFR) Part 312. This document is not intended to address whether the requirements beyond "All Appropriate Inquiry" or legal obligations with regard to hazardous substances or petroleum products have been met. Only practically reviewable information that yielded reasonably ascertainable data relevant to the Site was evaluated.

The purpose of this Phase I ESA is to identify, to the extent feasible pursuant to the process described herein, recognized environmental conditions (RECs), historical recognized environmental conditions (HRECs), and business environmental risks (BERs) in relation to the Site. This Phase I ESA is based upon a visual inspection of current surface conditions. Sampling for asbestos, Lead-Based Paint (LBP), and soil and groundwater contamination were not within the described scope of work and were not conducted as part of this Phase I ESA investigation. ALL Consulting (ALL) assumes no liability and makes no judgment concerning the Site's subsurface condition based upon the compiled Phase I ESA information and Site inspection findings.

Investigative procedures included a Site study and review of records and/or interviews with local, state, and Federal government agency representatives. Data reported are based on these records and a Site visit/inspection. In addition, ALL relied on interviews from the Site owner and other pertinent individuals. Environmental Data Resources, Inc. (EDR) provided additional information regarding regulatory records. ALL has assumed that the information provided by the above personnel and companies is true and correct. If the information provided is discovered to be incorrect, our conclusions and recommendations may not be valid. Findings are applicable to the date of February 27, 2012 (Monday).

This document has been prepared for the U.S. Army Corps of Engineers (USACE) - Tulsa District at the request of Ms. Adrienne Russ (Tulsa Industrial Authority [TIA]) on behalf of Mr. Terry McGee (McGee Enterprises), and is intended to greatly reduce, but not eliminate, speculation and uncertainty pertaining to the potential for recognized environmental degradation on the Site. This project was funded by the U.S. Environmental Protection Agency (USEPA) Region 6 and was tasked by USEPA to USACE-Tulsa District in response to a request from Ms. Russ for a Phase I ESA through the USEPA Targeted Brownfields Assessment (TBA) program. This document was prepared for the benefit of the above listed entities and may not be utilized by any other person or entity without their written consent or the approved written consent of ALL. The purpose of this report is to assess, to the extent feasible, the potential for environmental impact or impairment on this Site due to previous land use, site activity or adjacent off-site activity. This project was initiated on February 24, 2012.

This document was prepared to the best of our ability and interpretation in conformance with the scope and limitations of ASTM Practice E 1527-05. Investigative procedures included a Site study and records review of Oklahoma Department of Environmental Quality (ODEQ), USEPA, and Tulsa County Health Department data. Data reported are based on these records and a Site visit/inspection. In performing this Phase I ESA, ALL Consulting employees have relied on interviews with state Government employees, Oklahoma Corporation Commission (OCC) representatives, and information supplied by EDR. ALL has assumed that the information provided by the above personnel and companies is true and correct. If the information provided is discovered to be incorrect, our conclusions and recommendations may not be valid. Findings are applicable to the date of the site visit (February 27, 2012).

#### 4.2. SCOPE-OF-SERVICES

#### 5.1. LOCATION AND LEGAL DESCRIPTION

The Site is located approximately four (4) miles northeast of downtown Tulsa, Tulsa County, Oklahoma, within an immediate area of residential and commercial developed property. The latitude and longitude coordinates for the Site are 36.1913; (36° 11' 28.68" N) and -95.935; (95° 56' 06.00" W) (NAD83/WGS84).

The Site is described as being bounded on the north by Tulsa Community College northeast campus and East Apache Street, on the east by multi-family residential housing and North Marion Avenue, on the south by Apache Manor Apartment Complex, and on the west by unused property, in the City of Tulsa, Tulsa County, Oklahoma, and as being the north half of the northeast quarter of the northeast quarter of Section 30. Township 20 North, Range 13 East of the Indian Meridian, less the east 40 feet thereof and except the east 245 feet of the south 125 feet of the north half of the northeast quarter of the northeast quarter of the northeast quarter, Section 30, Township 20 North Range 13 East of the Indian Meridian containing 2.22 acres more or less (m/l).

**Figure 1** presents a topographic map of the Site. **Figure 2** is a general layout of the Site and adjoining areas with the approximate locations of observed features indicated.

#### 5.2. SITE AND VICINITY CHARACTERISTICS

The Site is located approximately four (4) miles northeast of downtown Tulsa, Oklahoma, within an immediate area consisting mostly of multi-family and single family dwellings, small businesses, and Tulsa Community College northeast campus. The Site is bounded on the north by East Apache Street and the Tulsa Community College northeast campus, on the east by North Marion Avenue and multi-family residential dwellings, on the south by Apache Manor Apartment Complex, and on the west by unused property, all within the city limits of the City of Tulsa, Tulsa County, Oklahoma.

The west boundary of the Site has the highest elevation at approximately 700 feet above mean sea level (MSL). On the eastern portion of the Site the elevation is approximately 690 feet above MSL. Drainage from the site is east toward an unnamed tributary of Flat Rock Creek.

The Site can be accessed from East Apache Street onto North Marion Avenue on the eastern boundary (see **Appendix D**: Photographs 3, 26, and 27.) The Site is primarily covered with a maintained vegetative cover (see **Appendix D**: Photographs 1-10).

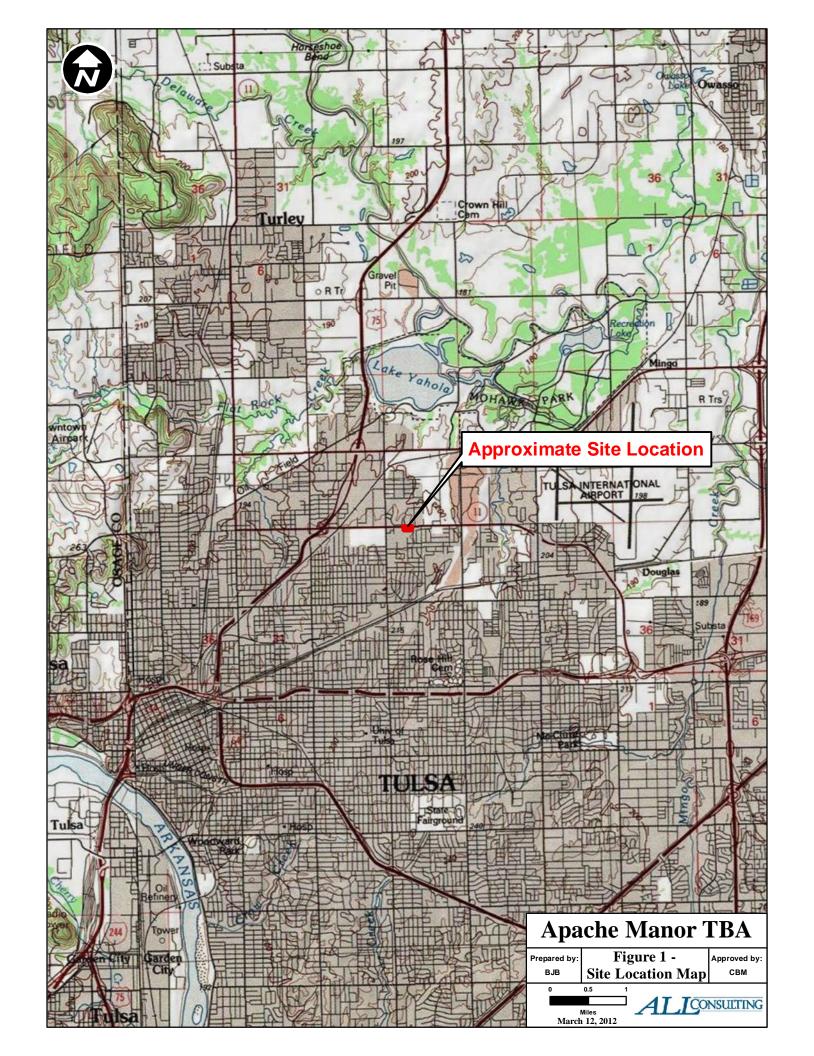

#### 5.3. CURRENT USE OF THE SITE

The Site is currently undeveloped with a baseball backstop located in the northwestern portion of the property (see **Appendix D**: Photographs 1-10 and 28). Construction/demolition debris (concrete pipes, concrete chunks, asphalt chunks, bricks) is located in the southwestern portion and along the western boundary of the Site. The debris in the southwestern potion of the Site has

been covered with soil to provide a level surface (see **Appendix D**: Photographs 11-14, 16-19, 21-23, and 25).

#### 5.4. ROAD, STRUCTURES, AND OTHER IMPROVEMENT DESCRIPTIONS

Access is available to the Site via East Apache Street on the north side of the Site and North Marion Avenue on the east. The Site contains no buildings but does contain a baseball backstop located in the northwestern portion of the Site. The onsite visual inspection revealed that construction/demolition associated debris exists on the southwestern portion of the Site below ground surface and above ground surface along the western boundary of the property. Concrete and clay pipes, chunks of concrete, chunks of asphalt, bricks, and other debris were seen and photographed for reference (see **Appendix D**: Photographs 16-19, 21-23, and 25).

#### **5.5.** CURRENT USES OF ADJOINING PROPERTIES

Mr. David Channell, Mr. Ben Bockelmann, and Mr. Doug Cooper visually inspected the adjoining properties from inside the Site property lines and additional vantage points via East Apache Street and North Marion Avenue. The following table summarizes the adjacent properties:

Direction	Property Name	<b>Property Usage</b>	Gradient
North	Tulsa Community College	College Campus	Cross Gradient
South	Apache Manor Apartments	Apartment Complex	Cross Gradient
East	Multi-Family Residential Property	Multi-Family Residential Property	Down Gradient
West	Vacant/Undeveloped Property	Vacant/Undeveloped	Up Gradient

  - The Site is not subject to any Activity and Use Limitations (AULs).
- 3) Specialized knowledge or experience of the person seeking to qualify for the LLP.
  - Mr. Terry McGee is the owner of the Site.
- 4) Relationship of the purchase price to the fair market value of the property if it were not contaminated.
  - -Information on purchase price to fair market value was provided in the form of Tulsa County tax Assessor document showing an appraised value of \$27,500 for land and improvements, and a Special Warranty Deed that indicates that the property was purchased for \$10.00 "and other valuable considerations...". However, Mr. Terry Price, Property Owner, indicated that he purchased the property at an auction at or near fair market value.
- 5) Commonly known or reasonably ascertainable information about the property.
  - No previously identified environmental conditions are known.
- 6) The degree of obviousness of the presence or likely presence of contamination at the property, and the ability to detect the contamination by appropriate investigation.
  - The ODEQ does not list this property in any environmental database.

**Appendix B** provides a copy of the completed User Questionnaire Form.

#### 7.0 SITE RECONNAISSANCE

#### 7.1. METHODOLOGY

A site inspection was conducted on February 27, 2012 (Monday), by Mr. David Channell of ALL, and was accompanied by Mr. Ben Bockelmann and Mr. Doug Cooper, also of ALL. The Site was inspected using the following protocol:

- Walking the perimeter and using a grid pattern to inspect the interior of the Site.
- Collecting photographic evidence and global positioning system (GPS) locations of relevant observations.

The Topographic Map (**Figure 1**) shows the general Site location and topographic relief. The Site Layout (**Figure 2**) indicates the approximate location of the features referenced in the following subsections. The Site Inspection Form is provided in **Appendix C**. The Site Photographs are provided in **Appendix D**.

#### 7.2. SITE SETTING

The Site is located approximately four (4) miles northeast of downtown Tulsa, Oklahoma, within an immediate area of residential and commercial developed property. Population density and property development increase immediately to the south with a multi-family apartment complex and east across North Marion Avenue with multi-family dwellings. The Apache Manor Block 5 TBA Site is described as being bounded on the north by East Apache Street and Tulsa Community College northeast campus, on the east by North Marion Avenue and multi-family residential dwellings, on the south by Apache Manor Apartment Complex, and on the west by unused property, in the City of Tulsa, Tulsa County, Oklahoma.

#### 7.3. SITE OBSERVATIONS

The Site is currently vacant and undeveloped with a baseball backstop located in the northwestern portion of the Site. The Site is completely accessible and is covered with a maintained vegetative cover (see **Appendix D**: Photographs 1-10 and 28). The Site generally slopes from the west to the east.

Observations for distressed vegetation were difficult due to the dormancy of plants during the winter; however, there were no observable indications of distressed vegetation at the Site at the time of the Site inspection.

The Site contains what appears to be debris associated with construction/demolition activities in the southwestern portion of the Site and along the western boundary. The debris located in the southwestern portion of the Site has been covered with soil to provide a level ground surface for the property. However, some debris in this portion of the Site is visible at ground surface (see **Appendix D**: Photographs 11-14).

According to the **Figure 3 – Flood Map**, none of the Site is within the 100-year or 500-year flood plain associated with Coal Creek.

A storm sewer manhole is located on the northeast corner of the property. The sewer line appears to run along the eastern and northern boundaries of the Site as manholes are also located on the corner across North Marion Avenue and on the Apache Manor Apartment Complex property (see **Appendix D**: see photograph 15).

A review of the historical aerial photographs of the Site from 1967 revealed the presence of apparent oil well lease roads and oil/gas well sites on the adjacent property to the south. The onsite visual inspection did not reveal any locations of previous oil/gas wells.

The Site currently has no improvements or end-user utility hookups, but the Site's available utilities are provided by the following:

Utility	Utility Company
Potable Water	City of Tulsa
Natural Gas	Oklahoma Natural Gas
Electricity	Public Service Company of Oklahoma
Trash	American Waste Control
Sewer	City of Tulsa

#### SITE CHARACTERISTICS

#### 7.4. TOPOGRAPHY

According to the U.S. Geological Survey (USGS) 7.5-Minute Topographic Map, Tulsa Quadrangle, the subject property is located in a relatively flat area, gently sloping downward to the east towards an unnamed tributary of Flat Rock Creek. The Site elevation ranges from approximately 700 feet above MSL in the western portion of the Site to 690 feet above MSL in the eastern portion of the Site. **Figure 1** is a topographic map of the Site and surrounding area.

#### 7.5. FLOOD PLAIN INFORMATION

Federal Emergency Management Agency (FEMA) Federal Insurance Rate Map (FIRM) Panel No. 40143C0233K for Tulsa County, Oklahoma, indicated that none of the Site is mapped within the 100-year or 500-year floodplains. The 100 year flood plain is that area in which a flood has a 1% chance of being equaled or exceeded in any single year. **Figure 3** is a Flood Map for the area.

#### **7.6.** Soil

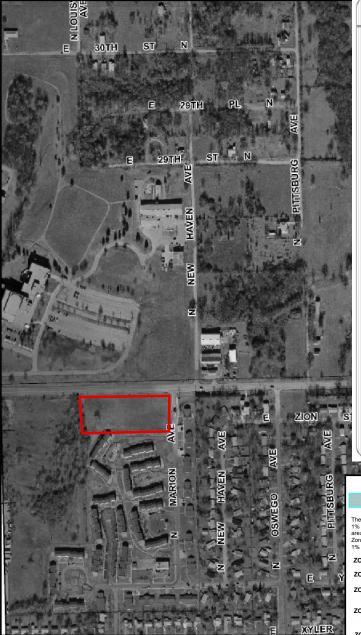

According to the United States Department of Agriculture - Natural Resources Conservation Service Soil Map, the Site consists of the following soil types: Coweta–Bates Complex and Coweta–Urban Land-Eram Complex. The Coweta-Bates Complex typically has 3 to 5% slopes, medium runoff, is well drained, and is not typically subject to flooding or ponding. The Coweta-Urban land-Eram Complex typically has 3 to 12% slopes, a medium runoff rate, is well drained, and is not typically subject to ponding or flooding. **Figure 4** is a Soils Map of the area.

#### 7.7. GEOLOGY

The Geologic Map of Oklahoma shows the geologic units underlying subject area to consist of the Upper Pennsylvanian age Seminole Formation (Psl), comprised mainly of shale with interbedded siltstone and sandstone. **Figure 5** is a Geology Map of the area.

#### **7.8. RADON**

Radon gas potential is a low-risk environmental hazard for the Site. According to the Oklahoma Geologic Survey Radon-Potential Map of Oklahoma (GM-32), Tulsa lies in an area designated as Zone 3, an area with low radon concentrations and minimum potential for radon health hazards. Radon is a naturally occurring radioactive gas formed by the spontaneous decay of isotopically unstable uranium to stable lead. Some amount of uranium is found in all rocks and soils. Radon is generated in the top 10-20 feet of the ground and either decays to a solid in the ground or escapes to the air. In air, the radon is generally diluted to very low concentrations before decaying. However, in buildings and houses, radon can accumulate to concentrations considered to present a health hazard. Hazards occur in low places such as basements and unventilated spaces. **Figure 6** is a Radon Map of the area.

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 11% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding the 1% annual chance flood. Areas of Special Flood Hazard Area is the area subject to flooding the 1% annual chance flood. #### 7.9. OIL AND GAS WELLS

Topographic maps provided by EDR indicate that the Site lies within an area used for oil field production, with oil wells being symbolized by circles. The topographic maps depict one (1) oil well within the Site and additional oil wells on the adjacent property to the south. The source used to generate the oil well location data is unknown; therefore, the reliability of the data is also unknown. However, a review of information provided by Sooner Well Log Services, Inc., revealed no well records and no plugging records exit for wells within the northeast quarter of the northeast quarter of Section 19, Township 20 North, Range 13 East, of the Indian Meridian. Copies of the Sooner Well Log Service records are included in **Appendix J**.

#### 8.0 HISTORICAL REVIEW

During the course of this Phase I ESA, various forms of historical documentation and available resources were evaluated to determine a history of the previous uses of the subject property and surrounding area. In order to help identify the likelihood of past uses having potentially led to a REC in connection with Site, the following documents were reviewed:

#### 8.1. HISTORICAL AERIAL PHOTOGRAPHS

ALL obtained the 1967, 1973, 1980, 1984, two (2) 1995 photos at different scales, 2005, 2006, and 2008 aerial photographs from EDR. The historical aerial photographs are provided in **Appendix E**.

#### 1967 Historical Aerial Photograph:

The 1967 aerial photograph depicts the Site as undeveloped. A drive-in theater is located on the property adjacent to the west of the Site. Housing developments are located immediately east and approximately 0.25 mile south of the Site. Industrial /commercial development is located west and southwest of the Site. Three light colored areas that potentially depict oil/gas well sites are located on the property adjacent to the south of the Site. These are the approximate locations of oil/gas wells depicted on the topographic maps. The property across Apache Street to the north is undeveloped.

#### 1973 Historical Aerial Photograph:

The 1973 aerial photograph is blurred, making it difficult to discern individual features of the Site and adjacent properties. What appears to be an apartment complex is located on the property adjacent to the south. Due to blurry nature of this aerial photograph, any other changes from the 1967 aerial photograph are unable to be determined.

#### 1980 Historical Aerial Photograph:

The 1980 aerial photograph depicts the Site and adjacent properties as remaining largely unchanged from the 1973 aerial photograph. However, new roads and approximately three (3) structures are depicted on the property north of Apache Street and new structures are depicted approximately 0.75 mile west-northwest of the Site across Harvard Avenue and Apache Street.

#### 1984 Historical Aerial Photograph:

With the exception of continued development of the property to the north and the removal of the drive-in theater on the property adjacent to the west, the 1984 aerial photograph depicts the Site and adjacent properties as remaining largely unchanged from the 1980 aerial photograph.

#### 1995 Historical Aerial Photograph:

The 1995 aerial photographs depict completed development of the property north of the Site, and new industrial/commercial structures are depicted west–northwest of the Site across Harvard Avenue and Apache Street Encroaching vegetation is apparent on the property adjacent to the west. The remainder of the Site remains largely unchanged as compared to the 1984 aerial photograph.

ALL Consulting 18 Project: Apache Manor Block 5 TBA
Project No. 1273.AMAN.00 Location: Tulsa, OK

#### 2005 Historical Aerial Photograph:

The 2005 aerial photograph depicts the Site and the adjacent properties as largely unchanged compared to the 1995 aerial photograph.

#### 2006 Historical Aerial Photograph:

The 2006 aerial photograph depicts all areas of the Site and the adjacent properties as remaining largely unchanged from the 2005 aerial photograph.

#### 2008 Historical Aerial Photograph:

The 2008 aerial photograph all areas of the Site and adjacent properties as remaining largely unchanged from the 2006 aerial photograph.

#### **8.2.** ABSTRACT DOCUMENTS

The abstract document for the Site was not reasonably ascertainable during the course of the records review due to time restraints. The absence of the abstract document is not considered to be significant to the conclusions and recommendations of this report as information obtained through the Site visit, property owner and adjoining property owner interviews, and historical documentation (topographic maps, aerial photographs, Sanborn Maps, and City directories) review is believed to have provided much of the same information as would be obtained in the abstract if it had been available.

#### 8.3. HISTORICAL SANBORN MAPS

EDR performed a search of the complete holdings of the Sanborn Library, LLC, collection on the target property and no fire insurance maps covering the target property were found. The record of an attempt to obtain Sanborn Map coverage of the Site is included in **Appendix F**.

#### 8.4. TOPOGRAPHIC MAPS

Topographic Maps were obtained from EDR for the years 1901, 1954, 1967, 1973, and 1982. **Appendix G** contains a copy of available Topographic Maps.

#### 1901 Topographic Map:

The 1901 Topographic Map depicts the early stages of development of the City of Tulsa. This map depicts a highway located on or near the Site. Coal Creek is located approximately one (1) mile east. An unnamed tributary is located south of the Site and runs east to Coal Creek. One (1) structure is depicted approximately 0.25 miles to the east along Harvard Avenue. The area surrounding the site appears to be largely undeveloped and sparsely populated.

#### 1954 Topographic Map:

In the 1954 map the Site is depicted as containing no structures and approximately one (1) oil well location. This map depicts a drive-in theater located on the adjacent property to the west. Approximately three (3) structures are depicted along North Harvard approximately 0.25 miles west of the Site. Approximately 0.25 mile west, south, and north of the Site, population density increases.

#### 1967 Topographic Map (Photo revised from the 1954 Topographic Map):

Two industrial/commercial type buildings southeast of the Site, and new development east of the Site are the only significant additions to the 1967 topographic map compared to the 1954 map. Industrial/commercial development approximately 0.75 mile east has also been added. There are no significant changes to the Site.

#### 1973 Topographic Map (Photo revised from the 1954 Topographic Map):

The addition of Apache Manor Apartment Complex on the south side of the Site appears to be the most significant change in the 1973 topographic map. Additional industrial/commercial type structures to the west and southwest of the Site have also been added to the 1973 topographic map. Additional industrial/commercial development approximately 0.75 mile west of the Site is also depicted on this map. There do not appear to be any significant changes to the Site as compared to the 1967 photograph.

#### 1982 Topographic Map (Photo revised from the 1954 Topographic Map):

The 1982 Topographic Map depicts early developmental of the property across Apache Street to the north. No significant changes within the Site or other surrounding properties as compared to the 1973 map are depicted.

### 14.0 FINDINGS AND CONCLUSIONS

ALL Consulting has performed a Phase I ESA in conformance with the scope and limitations of ASTM Practice E 1527-05 on the Apache Manor Block 5 TBA Site in the City of Tulsa, Tulsa County, Oklahoma. An onsite inspection was conducted on Monday, February 27, 2012. Any exceptions to or deletions from this practice are described in Section 4.3 of this report. Please review the following findings of the inspection.

- A) The Site currently consists of vacant and undeveloped land. The Site is covered with a maintained vegetative cover (see **Appendix D**: Photographs 1-10). The topography generally slopes toward the east. Observations for distressed vegetation were difficult due to the dormancy of plants during the winter; however, no signs of distressed vegetation were evident during the Site inspection. Debris associated with construction/demolition activities was observed during the Site Inspection (see **Appendix D**: Photographs 16-23 and 25). Included in the debris were several pieces of concrete pipe, clay sewer pipe, bricks, asphalt, and chunks of concrete (see **Appendix D**: Photographs 11-14, 17-19, 21, 22, and 25). The debris is limited to the western boundary of the Site although it appears that some debris is located in the southwestern portion of the Site and has been covered by soil to provide a level ground surface (see **Appendix D**: Photographs 11-13).
- B) A review of the historical aerial photographs of the Site from 1967, 1973, 1980, 1984, 1995, 2005, 2006, and 2008 revealed the presence of apparent oil well lease roads and oil well sites on the property adjacent to the south. However, the onsite visual inspection revealed the reported locations of previous oil well sites were no longer present as the Apache Manor Apartment Complex has been constructed on these locations. Additionally, a review of information provided by Sooner Well Log Services, Inc., as well as the OCC Geographical Information Systems Data provided no well records or well plugging records within the Site. **Figure 2** is a general layout of the Site and adjoining areas with the approximate locations of observed features indicated.
- C) No historical Sanborn maps exist for the Site. A review of historical documents and interviews with government officials, the property owner, and adjacent property occupants revealed that no dwellings, commercial, or industrial properties were identified as being located within the Site.
- D) A review of historical regulatory records revealed four (4) confirmed releases from Leaking Underground Storage Tanks (LUSTs) within one-half mile radius of the Site. All of the releases were up-gradient from the site and are currently closed. Due to the closed status, distance, and/or relative topographic positions, these LUST cases are not considered to pose a current material threat for adverse environmental impact to the Site
- E) Additional information gathered through records reviews, interviews with persons knowledgeable about the Apache Manor Block 5 Site and its history, and from Site observations by ALL, indicates that no additional releases or potential releases on, or near, the Site were discovered that would be considered above de minimis conditions.

### **Recommendations:**

Based on information obtained during the Site visit conducted on February 27, 2012, as well as information obtained through historical records review and interviews, this assessment has identified no RECs, one (1) HREC, no BERs, and two (2) Other Environmental Finding. As no RECs were identified, it does not appear that further investigation is warranted at this time. However, this opinion is based solely on conditions at the time of the inspection. Subsequent changes to Site conditions may require additional investigation to determine if any environmental impacts have occurred. The environmental findings within each category are summarized below.

### **Recognized Environmental Conditions (REC)**

1) No RECs were identified during the Site visit or through information acquired during historical records review and interviews

### **Historical Recognized Environmental Conditions (HREC)**

1) *Historic Oil and Gas Wells:* A review of the historical topographic maps indicates that three (3) wells were located on or near the Site. A review of historical aerial photographs of the Site from 1967 revealed the presence of apparent oil well lease roads and oil well sites on property adjacent to the south. However, a review of information provided by Sooner Well Log Services, Inc., produced no well records or plugging records for wells within the boundaries of the site. Currently unidentified surface and subsurface features related to petroleum production may be discovered during development of the Site. Therefore, if such features are noted during future development, it is recommended that surface, subsurface, and groundwater sampling be conducted and analyzed for total petroleum hydrocarbons (TPH), RCRA Metals, volatile organic compounds (VOCs), semi-volatile organic compounds (SVOCS) and Brine in the area of the observed oilfield related feature to determine if there have been any adverse environmental impacts above regulatory action levels.

### **Business Environmental Risks (BER)**

1) No BERs were identified during the Site visit or through information acquired during historical records review and interviews.

### **Other Environmental Findings**

1) *Old Debris Piles:* Observations made during the onsite investigation revealed the presence of construction/demolition debris along the western boundary, and in the southwestern portion within interior of the Site. While no hazardous materials or petroleum products were observed within the debris, it is recommended that the removal of any debris from the Site should be coupled with careful observation for any potential contaminants associated with the debris.

2) Former LUST Sites: The four (4) LUST cases (The Chief Realty Company, UPS Ground Freight facility, J.R. Herman Gibson site, and Quik Trip Store #4) the latest of which was closed on February 17, 2011. Due to the closed status of these former LUST cases, the sites are not currently considered to present a material threat for adverse environmental impact to the Site. A closed status indicates that either the location was found to be below regulatory action thresholds, or was remediated to the satisfaction of the governing regulatory agency. However, in the event that regulatory action thresholds change in the future, there is a possibility that these LUST cases could be reopened. Should that occur, further investigation may be warranted.

### **EXECUTIVE SUMMARY**

### **DESCRIPTION**

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1909 through 2006. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

### **RECORD SOURCES**

EDR is licensed to reproduce certain City Directory works. Reproduction of City Directories without permission of the publisher may be a violation of copyright.

### **SURROUNDING SITES: SEARCH RESULTS**

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

### STANDARD ENVIRONMENTAL RECORDS

### Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting

the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 06/15/2011 has revealed that there is 1 RCRA-CESQG site within approximately 0.25 miles of the target property.

A review of the LUST list, as provided by EDR, and dated 01/06/2012 has revealed that there are 4 LUST sites within approximately 0.5 miles of the target property.

Hazardous Waste Summary:

Waste code: D000 Waste name: Not Defined

Waste code: D001

Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF

> LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code: D002

Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

> CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code: D003

A MATERIAL IS CONSIDERED TO BE A REACTIVE HAZARDOUS WASTE IF IT IS Waste name:

NORMALLY UNSTABLE, REACTS VIOLENTLY WITH WATER, GENERATES TOXIC GASES WHEN EXPOSED TO WATER OR CORROSIVE MATERIALS, OR IF IT IS CAPABLE OF DETONATION OR EXPLOSION WHEN EXPOSED TO HEAT OR A FLAME. ONE EXAMPLE

OF SUCH WASTE WOULD BY WASTE GUNPOWDER.

#### Federal CERCLIS NFRAP site List

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

### State and tribal Brownfields sites

**BROWNFIELDS: Brownfield Sites** 

Brownfields are defined by Oklahoma law as abandoned, idled or under used industrial or commercial facilities or other real property at which expansion or redevelopment of the real property is complicated by environmental contamination caused by regulated substances. This program provides a means for private parties and government entities to voluntarily investigate and if warranted, clean up properties that may be contaminated with hazardous wastes. The formal Brownfields Program provides specific state liability relief and protects the property from federal Superfund actions.

#### Local Brownfield lists

## US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

### OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principal investigative components:

- 1. Groundwater flow direction, and
- 2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

## **GROUNDWATER FLOW DIRECTION INFORMATION**

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

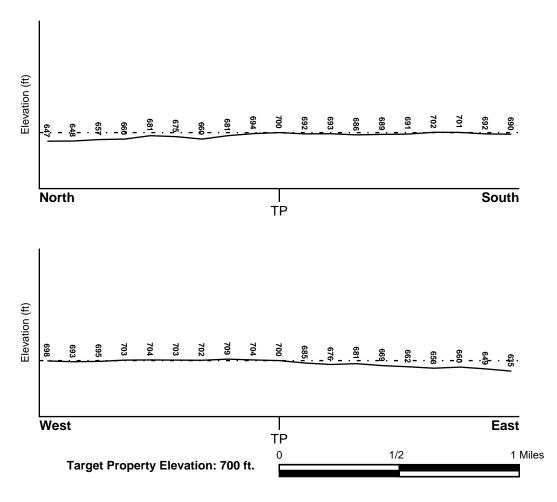

### **TOPOGRAPHIC INFORMATION**

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

#### TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General ENE

#### SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

### HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

### HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

## **AQUIFLOW®**

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

## **GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY**

## **GROUNDWATER FLOW VELOCITY INFORMATION**

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

## GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

### **TOPOGRAPHIC INFORMATION**

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Scanned Digital USGS 7.5' Topographic Map (DRG)

Source: United States Geologic Survey

A digital raster graphic (DRG) is a scanned image of a U.S. Geological Survey topographic map. The map images are made by scanning published paper maps on high-resolution scanners. The raster image is georeferenced and fit to the Universal Transverse Mercator (UTM) projection.

### HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 2003 & 2011 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

### HYDROGEOLOGIC INFORMATION

AQUIFLOW<sup>R</sup> Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.
